

VS Bulletin 2022.1

Bovine Tuberculosis Testing Requirements for Cattle Imported to the United States from Mexico

1. Purpose and Background

This document updates the bovine tuberculosis (TB) requirements for cattle imported from various States and zones within Mexico. APHIS establishes TB testing requirements for Mexican cattle in accordance with existing regulations, based on evaluations of the status and control of bovine TB in Mexican States. Earlier versions of this document contained the list of the TB status and specific TB testing requirements before entry to the United States for cattle from Mexican States and zones. This list is revised periodically because of ongoing APHIS reviews of TB control in Mexico.

This document does not address additional import requirements related to cattle fever ticks or brucellosis. Those requirements are in title 9, *Code of Federal Regulations* (9 CFR) 93.427, paragraphs (b) (1) and (b)(2), and 9 CFR 93.442 respectively. Additional protocols for importing cattle and bison from Mexico into the United States address other import requirements.

The attachment provides a comprehensive listing of the TB status of all Mexican States and zones, including the municipalities comprising any zones (if applicable).

Pursuant to the Congressional Review Act (5 U.S.C. § 801 et seq.), the Office of Information and Regulatory Affairs designated this rule as a non-major rule, as defined by 5 U.S.C. § 804(2).

2. Document Status

- A. Review date: 03/01/2025.
- B. This document replaces Veterinary Services Bulletin 2021.1.

3. Reason for Reissuance

APHIS issued a final rule on September 17, 2020, which established a new system for evaluating and classifying the TB status of foreign regions and applying associated import testing requirements. These regulations are encoded at 9 CFR 93.437 through 93.439. As indicated in the final rule, APHIS is temporarily allowing importation of cattle from eligible foreign regions to continue under administrative measures such as this Bulletin while completing the notice-based regulatory process to formally classify their TB status. Veterinary Services (VS) has updated this document to reflect changes in the bovine TB

U.S. DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service
Veterinary Services

VS Bulletin 2022.1

status of several Mexican regions which are not eligible for classification under the new regulations at this time. Specifically: The Baja California modified accredited (MA) Zone, Chiapas accreditation preparatory (AP) Zone, Guanajuato AP Zone, Guerrero AP Zone, Mexico AP Zone, Michoacán AP Zone, Nayarit MA Zone, San Luis Potosi AP Zone (A3), Tabasco AP Zone, and the Zacatecas-Jalisco AP Zone. Effective February 15, 2021 these Zones will be reclassified as non-accredited (NA) status.

4. Authority and References

A. Authorities (*Code of Federal Regulations* (CFR)):

[7 CFR 371.4](#)

[9 CFR 93.400](#)

[9 CFR 93.438\(d\)](#)

B. Definitions:

The following definitions are abbreviated. Please refer to the Bovine Tuberculosis Eradication Uniform Methods and Rules (UM&R) (January 1, 2005) for detailed definitions.

- 1) Accredited herd (cattle): An accredited herd is one in which all eligible animals have passed at least two consecutive official TB tests conducted at 9- to 15-month intervals; has no evidence of, or exposure potential to, bovine TB; and meets the standards of the January 2005 UM&R. An accredited herd maintains its status through annual herd testing around the anniversary date of the original herd test.
- 2) Herd of origin: A herd of one or more sires, dams, and their offspring from which animals in a consignment presented for interstate (within Mexico) or international movement originate; the birth herd.

Note: Animals from a herd of origin located in an NA region or that have otherwise resided in an NA region, including animals from certified-free herds, are not eligible for export to the United States for any purpose other than immediate slaughter.

- 3) Zones are defined as follows:
 - a. Modified accredited advanced (MAA) States or zones: This classification defines the area (a State, or zone within a State with split status) that meets the requirements for MAA status. If a State contains more than one MAA zone, the zones are referred to numerically (e.g., MAA zones 1 and 2).
 - b. Modified accredited (MA) States or zones: This classification defines the area (a State or zone within a State with split status) that meets the requirements for MA status. If a State contains more than one MA zone, the zones are referred to numerically (e.g., MA zones 1 and 2).

U.S. DEPARTMENT OF AGRICULTURE

Marketing and Regulatory Programs
Animal and Plant Health Inspection Service
Veterinary Services

VS Bulletin 2022.1

- c. Accreditation preparatory (AP) States or zones: This classification defines the area (a State or zone within a State with split status) that meets the requirements for AP status. If a State contains more than one AP zone, the zones are referred to numerically (e.g., AP zones 1 and 2).
 - d. Nonaccredited (NA) States or zones: This classification defines the area (a State or zone within a State with split status) that does not meet the minimum requirements for AP status. If a State contains more than one NA zone, the zones are referred to numerically (e.g., NA zones 1 and 2).
- 4) Whole-herd test (WHT): An official tuberculin test administered to:
- a. All cattle in a herd of origin that are 6 months of age or older (Note: All animals of less than 6 months of age not tested during the WHT must still be accurately recorded in the WHT TB test charts. Records must include proper identification and age of animals. ID and age of animals less than 6 months of age during the WHT must be consistent on any future TB test charts.
 - b. All cattle in the herd of origin that are less than 6 months of age and were not born into the herd of origin, unless they were born in and originated from:
 - i. A TB-free herd.
 - ii. An accredited herd.
 - iii. A herd of origin that has tested negative to a WHT and the individual cattle have tested negative to any additional individual tests for TB required by the Administrator.

The WHT is valid for 12 months before importation to the United States. VS does not require an additional individual animal test for steers and spayed heifers if the animals were included in the WHT test and are exported to the United States within 60 days of the WHT. After 60 days, VS requires an individual animal test for steers and spayed heifers that is valid up to 60 days from the test interpretation date. Breeding cattle must further have a VS-administered individual animal TB test when presented for entry to the United States. Such testing must be administered at least 60 days from the previous TB test.

5. Audience

VS employees, other Federal and State agencies, and members of the public.

6. Import Testing Requirements

NOTE: Cattle for immediate slaughter can originate from accredited as well as nonaccredited regions. However, Mexico requires that these animals be TB tested before

U.S. DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service
Veterinary Services

VS Bulletin 2022.1

export to the United States. For more information, please refer to the Import Protocol posted on our Web site.

TB test charts must accompany the shipment at the time of presentation for entry to the United States.

A. Cattle from States and Zones with Accredited Free (AF) status

No AF States or Zones currently exist in Mexico.

B. Cattle from States and Zones with MAA Status

The entire State of Sonora is currently the only MAA-status State in Mexico. No MAA zones currently exist in Mexico.

MAA Status

Type of Cattle	Import Requirements
Steers and spayed heifers	No testing required.
Sexually intact cattle	One negative individual TB test at the border.

C. Cattle From States and Zones with MA Status

The following States and Zones in Mexico currently have MA status:

1. Chihuahua MA zone
2. Durango MA zone
3. Hidalgo MA zone
4. Puebla MA zone
5. Veracruz MA zone
6. Yucatan Peninsula Region (comprised of the States of Yucatan, Quintana Roo, and Campeche except the Campeche municipality of Palizada).

MA Status

Type of Cattle	Import Requirements
Steers and spayed heifers	One negative individual TB test within sixty (60) days of import.
Steers and spayed heifers from TB accredited-free herds	Proof of TB accredited-free herd status must be provided to the port veterinarian.
Sexually intact cattle	1. One negative individual TB test at the border. 2. Negative TB test within the past 12 months for the herd of origin.
Sexually intact cattle from TB accredited-free herds	1. One negative individual TB test at the border. 2. Proof of TB accredited-free herd status must be provided to the port veterinarian.

VS Bulletin 2022.1

D. Cattle from States and Zones with AP Status

The following States and Zones currently have AP status:

1. Coahuila AP zone
2. Nuevo Leon AP zone
3. Tamaulipas (entire State)
4. San Luis Potosi AP zones

***AP Status - NOTE: An official or committee veterinarian, or a SAGARPA-approved accredited veterinarian, must TB test all cattle in Mexico to be imported to the United States. The veterinarians must demonstrate acceptable caudal fold test response rates. SAGARPA posts a list of such veterinarians on its website.**

Type of Cattle	Import Requirements
Steers and spayed heifers	<ol style="list-style-type: none">1. One negative individual TB test within sixty (60) days of import.2. Negative TB test within the past 12 months for the herd of origin.
Steers and spayed heifers from TB accredited-free herds	<ol style="list-style-type: none">1. One negative individual TB test within 60 days of import.2. The port veterinarian must receive proof of TB accredited-free herd status.
Sexually intact cattle	<ol style="list-style-type: none">1. Two negative individual TB tests 60 days apart with the second test conducted at the border).2. Negative TB test within the past 12 months for the herd of origin.
Sexually intact cattle from TB accredited-free herds	<ol style="list-style-type: none">1. One negative individual TB test at the border.2. The port veterinarian must receive proof of TB accredited-free herd status.
Wild-caught rodeo or roping steers and spayed heifers (also known as Corriente cattle)	<ol style="list-style-type: none">1. One negative TB test of entire lot of assembled cattle at the beginning of the isolation period.2. Negative individual TB test conducted a minimum of 120 days after the first test. The cattle must be exported within 60 days of the last test.

E. Cattle from NA States and Zones in Mexico

Cattle from the following States and Zones can be imported for immediate slaughter only:

1. Aguascalientes (entire State)
2. Baja California (entire State)

U.S. DEPARTMENT OF AGRICULTURE

Veterinary Services

VS Bulletin 2022.1

3. Baja California Sur (entire State)
4. Campeche NA zone
5. Chiapas (entire State)
6. Chihuahua NA zones
7. Coahuila NA zones
8. Colima (entire State)
9. Distrito Federal
10. Durango NA zone
11. Guanajuato (entire State)
12. Guerrero (entire State)
13. Hidalgo NA zone
14. Jalisco (entire State)
15. Mexico (entire State)
16. Michoacán (entire State)
17. Morelos (entire State)
18. Nayarit (entire State)
19. Nuevo Leon NA zone
20. Oaxaca (entire State)
21. Puebla NA zone
22. Querétaro de Arteaga (entire State)
23. San Luis Potosí NA zone
24. Sinaloa (entire State)
25. Tabasco (entire State)
26. Tlaxcala (entire State)
27. Veracruz NA zone
28. Zacatecas (entire State)

Cattle coming from NA zones for immediate slaughter need only have one negative individual TB test, which is required by Mexico.
